
MANAGEMENT

- **treat underlying problem**
 - **optimise rate and rhythm**
 - **maintain perfusion**
 - **optimise preload**
 - **reduce afterload**
 - **optimise contractility**
 - **mechanical support**
-

MANAGEMENT

- treat underlying problem
 - **optimise rate and rhythm**
 - maintain perfusion
 - optimise preload
 - reduce afterload
 - optimise contractility
 - mechanical support
 - faster HR
 - minimises excessive distension and minimises TR
 - SV may be low
 - but balance with LV perfusion
 - sinus rhythm optimal
-
