

investigating the reaction

- nature
- causative agent
- plan for future

1. history
2. investigations

tests at specialist centre

- **MCT**
- **Skin prick tests** - 4-6 weeks after.
useful for IgE mediated allergy to NMBAs, penicillin, latex. Not useful for opioids
- **Intradermal tests** - second line, more sensitive, less specific, more uncomfortable, higher risk. useful for delayed hypersensitivity reactions
